

How to start a Food Waste Diversion Program

Food waste creates opportunity. Organic waste can be converted into a **RESOURCE** that feeds hungry people, nourishes animals, makes fuel and creates nutrients for the soil instead of rotting in the landfill causing harmful greenhouse gases.

- Step 1 Build internal support with stakeholders
- Step 2 Assess current waste stream, waste management and onsite capabilities
- Step 3 Evaluate processing options and logistics
- Step 4 Find partners for implementation
- Step 5 Develop program budget and identify funding
- Step 6 Plan, prioritize and set goals
- Step 7 Set up, create procedures, train and implement
- Step 8 Share through outreach and education
- Step 9 Track progress, monitor and maintain
- Step 10 Promote and celebrate results

How we can help

Wherever your organization is on a sustainability journey, we can build this program from scratch, work with an established team or assist with just one aspect.

We collaborate with green teams, culinary staff, operation/facility staff, administration, clients, waste haulers and other outside vendors to create programs that work.

SUSTAINABILITY
SOLUTIONS

www.NowPartOfTheSolution.com

Some why's

- Reduce environmental impact
- Compliance under SB 1383
- Opportunity to identify operational efficiencies and cost savings
- Education tie-ins and learning opportunities
